# Release Notes

For Uinta Windows & Android 1.7.3

These notes provide important information for Juniper Systems' release of Uinta 1.7.3 for Windows and Android.

Documentation and software updates are located on the Juniper Systems website: *https://junipersys.com/support/uinta*

New Features and Enhancements

- **Improvements to manual geometry editing:** The Windows and Android versions of Uinta allow drag/drop vertex editing with either mouse or touch.

- **Conditional logic for imported or existing records:** Uinta applies conditional logic to imported records that match configured logic conditions. When the user adds or edits a logic condition, Uinta prompts the user to retroactively apply the logic to existing records.

- **Improvements to Windows auto-update:** Uinta displays additional information and instructions for the latest Uinta software update.

Fixes

- Improved handling of memory in connection with large photos and attachments. On memory-constrained devices, this change reduces the restarting of the Android app.
