Yield Monitor

Bridging the gap between hard  
work and the information that  
makes your farm profitable

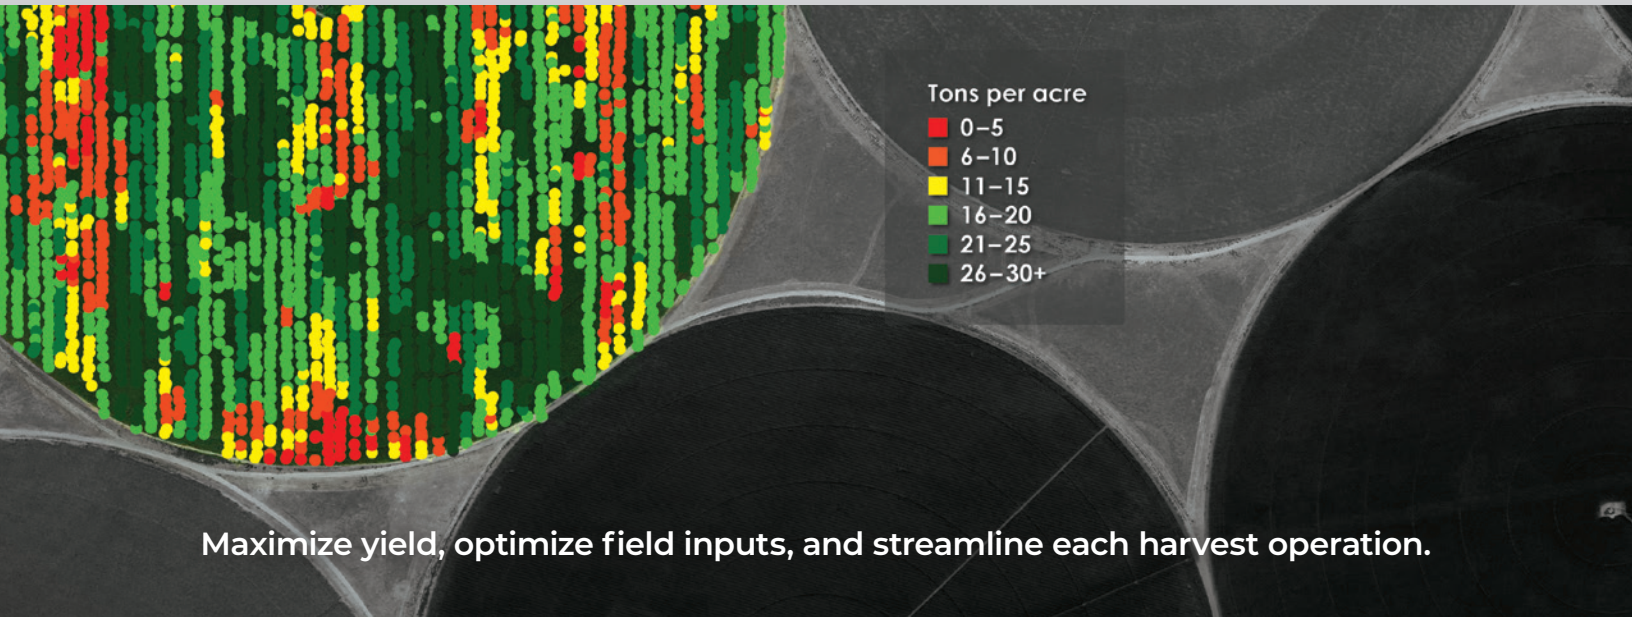

## IMPROVE YOUR BOTTOM LINE.

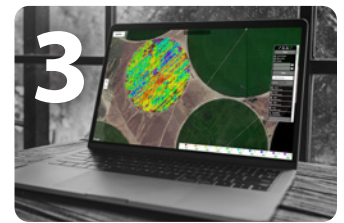

The Casma Yield Monitor by HarvestMaster provides a measurement of your hard work with each potato harvest. With reliable hardware that's easily mounted to an existing harvester, a simple-to-use interface in the cab, and data providing quick insight into farm performance, Casma helps to maximize resources and profitability.

Automated yield maps of fields are quickly accessed using the myCasma website to visualize row-by-row performance. It's the data you need, when you need it.

Maximize yield, optimize field inputs, and streamline each harvest operation.

## Rugged hardware

- Compatible with most harvesters and crop types
- Automatic wireless data transfers from harvester to myCasma.com

## Simple in-field tools

- Compatible operator interface with ISOBUS displays
- Appears as a virtual terminal on all major brands including John Deere, Ag Leader, and several others
- Instant access to key data, including average yield and total yield

## Profitable data

- Up-to-date yield maps every 20 minutes during harvest season
- Easily export yield maps for use in other Ag and GIS programs
- Unlock statistical data on each field, harvester, and truck or crop cart
- Gain a deeper understanding of how every portion of your field is performing
