

# Release Notes

Uinta™

## Data Collection and Mapping Software 2.2.0 Windows & Android

These notes provide important information for Juniper Systems' release of Uinta 2.2.0 for Windows, Android, and iOS.

Documentation and software updates are located on the Juniper Systems website: <https://junipersys.com/support/uinta-training>

### New Features and Enhancements

- **Uinta is now available on iOS devices!**
  - Download the app [from the App Store](#).
  - Log in with your existing Uinta credentials.
- **Added the ability to disable the auto-sync functionality.** Turn off the default auto-sync functionality from Uinta > Settings.

### Fixes

- Line weight changes show on the Android platform. When the weight value for a line is changed on Android, the change is visible on the map view.
- Newly created templates will show in the list of templates immediately after creation.
- The quick search no longer stops searching before the user completes typing the search value.
- Application no longer slows down when multiple forms are open simultaneously.
- Adding values into a newly added event from a table entry no longer causes the app to freeze momentarily.
