

Release Notes

For Uinta Windows 1.5.0

These notes include important information for Juniper Systems' release of Uinta 1.5.0 for Windows 10.

Documentation and software updates are located on the Juniper Systems website:

<https://www.junipersys.com/support>

What's New

- Simple shape symbology and additional icons and colors
- Conditional logic for form fields during data entry
- Related tables in form subsections
- Improvements to filtering and layer pop-up menus
- User positioned map labels
- Template design, management, and workflow improvements
- PDF export improvements
- New searchable 'Select List' field type
- Discrete control of layer label visibility on map view
- Basic shapefile export
- Manual cloud sync button
- Various other user interface enhancements

Bug Fixes

- Prevent capture of points at location 0.0°, 0.0°
- Prevent map icon clustering on exported PDF reports
- Inclusive date ranges on date filters
- Better support for advanced report templates
- Excel export improvements for records with subsections
- Various other performance and stability improvements

Known Issues

- **Backwards compatibility:** Devices sharing data in a cloud project should use the same version of Uinta. New features in Uinta 1.5.0 are not backwards compatible and could cause older versions to crash.
- **Large data sets:** Importing large data sets (10,000+ features/records) into a cloud project is not recommended at this time. Using offline reference layers such as mbtiles is preferred. This issue will be addressed in a future version. Please contact Juniper Systems if you need help supporting large data sets.
