# Release Notes
For Uinta Windows 1.5.5

These notes include important information for Juniper Systems' release of Uinta 1.5.5 for Windows 10.

Documentation and software updates are located on the Juniper Systems website:

https://junipersys.com/support/uinta

New Features and Enhancements

- Improved Navigation UI
- Compass integration for calibrated devices
- Photo capture improvements
- PDF report layout improvements
- Additional shape icons

Bug Fixes

- Fixed cloud sync authentication errors requiring multiple logins
- Fixed image rotation issues in PDF export
- Fixed errors when deleting attachments/photos from offline database
- Fixed list view to correctly display related table subsections
- Fixed crashes when viewing the calendar
- Fixed errors when searching text with apostrophe or quote characters
- Fixed list fields losing options when being edited from multiple devices
- Fixed attachment/photo syncing to wrong cloud account when switching projects
- Fixed crash in map view when dragging vertices by mouse

Known Issues

- **Backwards compatibility:** Devices sharing data in a cloud project should use the same version of Uinta. New features in Uinta 1.5 and later are not backwards compatible and could cause older versions to crash.
- **Large data sets:** Importing large data sets (10,000+ features/records) into a cloud project is not recommended at this time. Using offline reference layers such as mbtiles is preferred. This issue will be addressed in a future version. Please contact Juniper Systems if you need help supporting large data sets.
