

Adding a Shoulder Strap to the Mesa

The instructions and images below demonstrate how to attach a Juniper Systems Shoulder Strap to the Mesa Rugged Notepad. This is a fast, inexpensive, and easy method to provide a hands-free method of carrying the Mesa. The components pictured are standard parts used on the Juniper Systems Allegro MX. Users may substitute local parts following the same installation instructions.

To complete this project, you will need:

- A Mesa with a hand strap
- 12533 Shoulder Strap – One of these
- 12438 Stainless Steel #7 Split Ring – Two of these

Loosen one end of the Mesa hand strap.

Slide one of the rings onto the hand strap tether.

Slide the hand strap tether through the attachment loop on the Mesa.

Slide the hand strap tether end back through the ring.

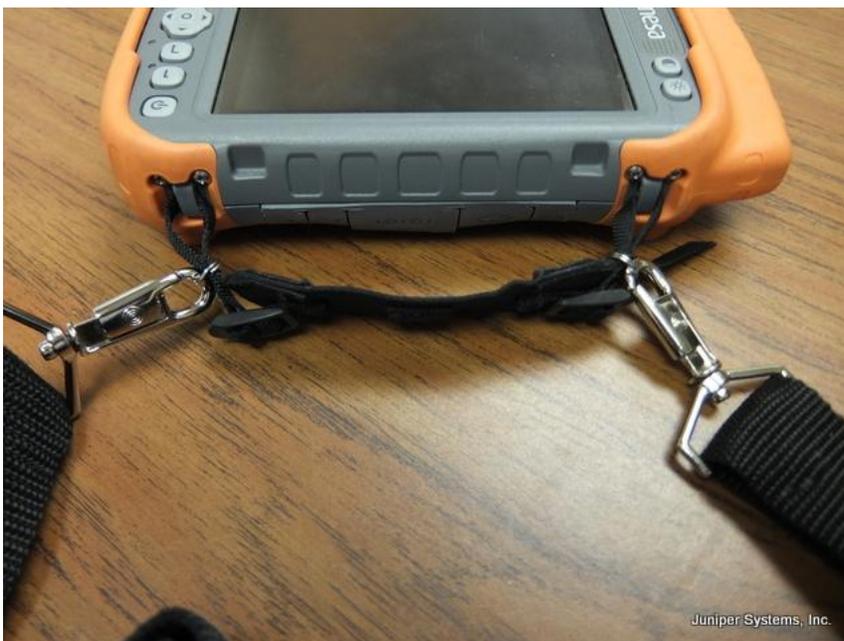

Attach the hand strap tether end to the hand strap buckle.

Repeat on the other end of the hand strap. You should now have a ring at each end of the hand strap.

Attach a shoulder strap hook to each ring on the hand strap. You now have a shoulder strap on the Mesa.

The Mesa with a shoulder strap.

You can also attach the hand strap/shoulder strap to any of the four corners on the Mesa .
